

State of Science: The Judiciary

Bilal M. Siddiqi Development Impact Evaluation (DIME), World Bank August 28, 2018

TRANSFORM DEVELOPMEN

ukaid

Why should we study the judiciary?

- Resolving disputes, enabling the economy and society to function
 - Contract enforcement
 - Property rights
 - Conflict prevention
- Protecting the fundamental rights of persons
 - Vulnerable populations
 - Crime and violence
- Providing a check on executive power

Some evidence on economic effects...

Property rights

- Investment incentives and the "de Soto effect" in Ghana and Peru (Besley 1995; Field 2005)
- Agricultural productivity in India (Banerjee, Gertler, and Ghatak, 2002; Banerjee and Iyer 2005)
- Land values in China and the US (Chari, Liu, Wang, and Wang, 2017; Hornbeck 2010)
- Labor supply in Peru and Mexico (Field 2007; de Janvry, Emerick, Gonzalez-Navarro, and Sadoulet, 2015)
- Access to credit in Sri Lanka (Besley, Burchardi, and Ghatak, 2012)
- Conservation in Rwanda and the world (Ali, Deininger, and Goldstein 2011; Costello and Grainger, 2015)

Contract enforcement

- Increases credit availability and reduces selective default against vulnerable banks in Italy and India (Jappelli, Pagano, and Bianco, 2005; Schiantarelli, Stacchini, and Strahan, 2016; Chemin 2012)
- Increased entrepreneurship in Pakistan and Brazil (Chemin 2009; Lichand and Soares;
- Better firm performance and survival (Kondylis & Stein 2018; Amirapu 2018; Achino, Bamieh, Coviello, Persico 2018)

UKaid

...and on protecting rights and reducing conflict and crime

Protecting the poor and vulnerable

- Women, landless, minorities more likely use the formal system to protect from biased customary system (Sandefur & Siddiqi, 2015)
- Legal aid protects tenants' rights in the USA mixed evidence (Greiner and Pattanayak, 2012; Greiner, Pattanayak and Hennessy, 2013, Frankel, Seron and Ryzing, 2001)
- Biased judicial decisions can seriously harm the vulnerable (Anwar, Bayer and Hjalmarsson, 2012; Abrams, Bertrand, and Mullianathan, 2013; Alesina and Ferrara, 2014)

Reducing conflict and crime

- ADR improves dispute resolution surrounding property; and educational campaigns on ADR lower conflict (Blattman et.al, 2014)
- Reforms in juvenile detention centers can reduce the rate of readmission in the center, which increases education (Heller et.al, 2018)
- Higher judicial quality deters crimes in Europe (Mocan et.al, 2018)

ukaic

How should we study the judiciary?

I. Data

- Courts are 'data-rich' but <u>'information-poor'</u>
- <u>Use data systems</u> where they exist, b<u>uild</u> <u>data systems</u> where they don't

II. Diagnostics

- <u>Identify core issues</u> in justice system functioning and performance
- <u>Measure</u> and <u>document</u> impacts of justice system reforms

III. Experimentation

ECONOMIC

DEVELOPMENT

- <u>Iteratively test interventions</u> to improve justice systems
- <u>Build government skills</u> and create policy feedback loops

DIME

TRANSFORM DEVELOPMENT

Data: Surveys

Legal needs

- Dispute incidence, forum choice, experience
- World Justice Project, HIIL, OSJI

Litigants

- Cost of justice (money, time, stress)
- Quality of the procedure (voice, respect, clarity)
- Quality of the result (fair distribution, damage restoration, resolution and explanation)

Judicial officers

- Norms, procedures
- Time use, behavior, biases

Courtroom observation

ECONOMIC DEVELOPMEN⁻

INSTITUTION

Data: Measurement

"[T]he judge applies the norm, interprets it in light of the case at hand, and justifies her decision with recourse to jurisprudential precedents and legal doctrine." (Basabe-Serrano, 2016)

Efficiency

- <u>Speed</u>: Clearance rates, backlog reduction
- <u>Value for money</u>: Best use of available resources

Quality

- <u>Predictability</u>, consistency with law, lack of bias
- Judicial review: Appeals upheld, quality audits

Access

- Affordability: Fees, transaction costs,
- <u>Reach:</u> Distance, time

Integrity

- Independence from politics, ideology
- <u>Corruption</u>: Bribery, extortion

Impacts

- <u>Economic gains</u>: Firm growth, investment, increases in employment and productivity
- <u>Citizen welfare:</u> socioeconomic gains, income, employment, less conflict and violence
- <u>Citizen perceptions:</u> trust in judiciary, trust in government, political participation

Diagnostics and experiments: Methods

Data analytics

- Used to diagnose problems with the judiciary
- Careful analysis of judicial data, other data sources

Quasi-experimental studies

- Used to understand the impact of judicial reforms (past and future)
- Event studies, difference-in-difference, regression analysis, etc.

Experiments

- Test possible interventions/reforms when the impact is unknown
- Can measure cost-effectiveness of multiple interventions/reforms

Diagnostics and experiments: What can we learn?

Data \Rightarrow information \Rightarrow monitoring \Rightarrow response

Incentive systems

- What information is created? Who receives the information? What is the (expected) response?
- Electronic systems, dashboards, e-courts
- Rewards: financial, non-financial, status, career concerns
- Accountability: top-down, peer-based, bottom-up

Behavior and preferences

- Subjective biases: co-affiliation, politics
- Behavioral biases: salience, availability, present bias
- Managerial constraints

Dispute \Rightarrow reporting \Rightarrow adjudication \Rightarrow enforcement

Reporting

- Legal information and civic education programs
- Building and upgrading courts
- Legal aid, mobile courts, paralegal programs

Adjudication

- Changes in law
- Case management, court procedures
- Alternative dispute resolution, specialized courts, other litigation alternatives
- Hiring and training judicial officers
- Assignment of roles and responsibilities

Diagnostics: the "cost" of slow justice in Croatia (simple approach)

GDP (2013): € 47.8 billion

Value of case backlog (2013): € 24.8 billion

TRANSFORM DEVELOPMEN

UKaic

Diagnostics: the cost of slow justice in Croatia (careful approach)

Electronic case management system

- 1.5 million unique commercial cases
- 2010 to 2015
- 90,000 unique firms

Orbis database

- 345,000 total Croatian firms
- 73,000 firms matched with Croatia case data

Analysis of impacts:					
Method:	Outcomes:				
Random assignment of	Revenue				
cases to judges	Assets				
	Stock valuation				
Treatment:	Survival				
Judge speed					

Diagnostics: the cost of slow justice

Diagnostics: Who benefits from formal justice in Liberia? (Sandefur & Siddiqi, 2015)

Diagnostics: judges are people too

US: Gamblers fallacy (Chen et al. 2016)

Israel: Calorie counts (Danziger et al. 2011)

TRANSFORM DEVELOPMEN

 \sim

UKaid

Diagnostics: subjective biases (Ash et al. 2018)

Quasi-experiments: changing rules in Senegal (Kondylis & Stein 2018)

Quasi-experiments: changing rules in Senegal (Kondylis & Stein 2018)

UKaid

TRANSFORM DEVELOPMENT

Quasi-experiments: Event studies can be done everywhere!

Croatia

- 5,000,000+ cases over 5 years
- 2,064 judges across 104 courts

Philippines

- Several million cases over 4 years
- 2,700 courts

India

- 13,000,000+ cases over 14 years
- Many, many courts

ECONOMIC

DEVELOPMENT

Experiments: Improving judicial performance in Kenya

What do we know about... more resources?

Hypothesis

Problem: lack of funding

Response?

More resources, i.e. more training, better computer systems, and more courts and judges

Findings

More resources alone will not solve the problem

- Resources effective if they introduce specific technologies/reforms (Botero et.al, 2003)
- e.g. computerized systems contributes can reduce delays (Dimitrova-Grajzl, et al. 2012; Yeung and Azevedo, 2011)

What do we know about... fewer litigants?

Hypothesis

Problem: excessive and indiscriminate access to justice leads to frivolous litigation and ties up courts

Suggested Solution

Increase the costs/raise the bar for going to court

Findings

Reducing access is a terrible idea

 Judges have weak incentives and high slack (Buscaglia and Ulen, 1997)

 Efficiency is not affected by wider access to lower-level courts, e.g. through simplified procedures and restricting lawyers' involvement (Botero et.al, 2003)

What do we know about... better lawyers?

Inefficient judges are not the main problem; lawyers often pursue delay and reduce efficiency

Suggested Solution

Increase competition and quality of lawyers

What do we know about... better rules?

· · · · · · · · · · · · · · · · · · ·					
Hypothesis	Findings				
Problem: rigid procedures and misaligned incentives	Simpler Procedures decrease time and costs, and increase access to justice (Mitsopoulos et.al, 2009)				
Suggested Solution	Streamlined Processes: Better case management enhances judicial efficiency (Coviello et.al, 2015)				
	Specialized Courts				
Simpler procedures, streamlined processes, specialized institutions, ADR	 Streamlined debt collection, labor tribunals or commercial courts improve efficiency (Blankenburg, 1999) 				
	 Small claim courts reduces time and expands access (Bermudes, 1999) 				
	Alternative Dispute Resolution (ADR) increases competition and choice, thus enhancing efficiency (Sadka et.al, 2017; Hendrix, 2000)				

Some key areas for reform – maybe?

- 1. Better rules and institutions seem to be the most effective in improving efficiency
 - a. Strengthening accountability increases efficiency
 - b. Judicial databases make it easier to track cases, and hard to manipulate or lose them
 - c. Individual calendars link case management to a particular judge increases accountability
 - d. **Statistics on judicial performance** reduce delay, even without enforcement mechanisms most effective when information is generated for each judge (Dakolias and Said 1999; Hendrix 2000)
- 2. Alternatives to the standard court system improves competition and choice
 - a. ADR and specialized courts provides alternative resolutions and save time for the courts
 - b. Simplifying procedures & deregulation of legal services increases efficiency
 - c. Simple rules and procedures for developing countries, which have excessive formality, increases efficiency (e.g. enhance community-based mechanisms for resolving conflicts)

ukaic

Other considerations...

Limits of Measurement

- Accuracy is hard to measure (main tool: satisfaction surveys)
- Studies do not tell us about cases never filed (for procedural problems, distrust or ignorance)

Partial vs. General Equilibrium Effects

• Reforms that work may increase congestion temporarily

Politics of Judicial Reform

- Politics of reform are difficult: forces that benefit from the status quo will attempt to block reforms
- Feasibility also depends on pressure from civil society (media, opposition, businesses) & foreign governments

ukaic
